

TEETH

MR. A. MOSELY,

SURGEON DENTIST,

30, PARK STREET, BRISTOL.

And at 35, Great Portland St., Portland Place, London :

Acquaints his Patients and the Nobility, Gentry, and Public generally of WILTSHIRE, and vicinity, that he may be consulted (as usual for the last seven years) during the month of December, as follows:-

At DEVIZES, on Thursday the 3rd of December, and Thursday the 17th of December, at Mrs. EARLE's, Wine Street.

At WARMINSTER, on Thursday the 10th of December, at Mr. LUSH's, Druggist, Market place.

At SWINDON, on Monday, the 21st of December, at Mr. PAGE's, High Street.

Hours of attendance from 11 to 4.

Mr. M., from a practical knowledge of the mechanical resources of his profession, and availing himself of the many recent improvements in the same department, is enabled to supply the loss of teeth upon certain and approved principles, and he can ensure the most accurate fit and perfect resemblance to nature, in every case, however difficult, without removing the root remaining in the mouth, or giving any pain whatever. The Artificial Teeth supplied by Mr. M., whether Natural, or formed of his newly-invented MINERAL (*which never change colour or decay however long in the mouth*), are fixed *without Wire or Ligature*, and he can guarantee the most perfect comfort to those who have hitherto failed to derive comfort from Artificial Teeth; and that they will answer every purpose of mastication, and articulation.

Mr. M. continues to render decayed Teeth sound and useful for mastication by the application of his CEMENT, (or Fine Gold). The operation is performed without the slightest pain or inconvenience. Loose Teeth fastened, Children's Teeth carefully regulated during dentition; Extracting, Scaling, and all other operations performed pertaining to Dental Surgery.

Devizes and Wiltshire Gazette 10 December 1846
